

# Carboplatin

Printed from <https://www.cancerquest.org/patients/drug-reference/carboplatin> on 02/15/2025

Brand name: Paraplatin®

IUPAC: cyclobutane-1,1-dicarboxylic acid

FDA approval: Yes

[Manufacturer Link](#)

Usage:

Carboplatin (Paraplatin®) is an alkylating agent used to treat a variety of cancers. Malignancies for which carboplatin is used include: Ovarian cancer, Germ cell tumors, Head and neck cancer, Small cell and non-small cell lung cancer, Bladder cancer, Relapsed and refractory (resistant to ordinary treatment) acute leukemia, endometrial cancer. Carboplatin is usually administered intravenously.<sup>1</sup>

Mechanism:

Carboplatin bind covalently to DNA and reacts with intrastrand and interstrand DNA sites to inhibit production of proteins, while also inhibiting transcription.<sup>1</sup>

The diagram above shows the 3D molecular structure of Carboplatin.
