Targeted Cancer Treatments Have Negative Effects on Sexuality

Printed from https://www.cancerquest.org/newsroom/2010/10/targeted-cancer-treatments-have-negative-effects-sexuality on 11/16/2026

Results from a French study on men and women treated with a variety of targeted cancer drugs show that the treatments negatively impact their sex lives. The effects were significant and both sexes were subject to this side-effect.

This study was presented at the 35th Congress of the European Society for Medical Oncology (ESMO) in Milan, Italy.
