Long Term Cognitive Effects Common In Stem Cell Transplant Recipients.

Printed from https://www.cancerquest.org/newsroom/2011/05/long-term-cognitive-effects-common-stem-cell-transplant-recipients on 11/15/2026

Patients treated with chemotherapy have long described cognitive/memory problems associated with the drugs. A new study of patients treated with chemotherapy and transplants with blood cell precursors has shown that the problems can last a long time. The study showed that while the mental effects went away over time for most patients, over 40% had some symptoms for at least five years after treatment.
