

Coffee Reduces Risk Of ER Negative Breast Cancer.

Printed from <https://www.cancerquest.org/newsroom/2011/05/coffee-reduces-risk-er-negative-breast-cancer> on 10/14/2025

A large Swedish study has shown that coffee consumption reduces the risk of estrogen receptor (ER) negative breast cancer in post-menopausal women. The study showed that many other factors influence breast cancer risk, including age at menopause, exercise levels and weight.
