New Targeted Melanoma Drug Approved.

Printed from https://www.cancerquest.org/newsroom/2011/08/new-targeted-melanoma-drug-approved on 11/14/2026

The FDA approved vemurafenib (ZELBORAF®), for the treatment of advanced melanoma. The drug can only be used to treat patients whose cancers have mutations in the BRAF gene. For those patients, vemurafenib has been shown be more effective than existing treatments. The drug is given as a pill.
