

# Breast Exam

Printed from <https://www.cancerquest.org/patients/detection-and-diagnosis/breast-exam> on 12/26/2024

Breast exams are the first step in early detection of breast cancer.

The American Cancer Society recommends [1](#) :

- women over 20 should do a monthly breast self exam
- women in their 20's and 30's should have a clinical breast exam every 3 years
- women over 40 should have a clinical breast exam yearly

This [PDF](#) from Susan G. Komen for the Cure summarizes early breast cancer detection techniques.

## *Self Breast Exam*

A self breast exam involves looking at and feeling your breasts to detect any abnormalities or changes. Susan G. Komen For the Cure also provides a [video tutorial](#) on how to perform a self breast exam.

## *Clinical Breast Exam*

Clinical breast exams should be done by a physician, nurse practitioner, or other specially trained medical professional who is well trained in the technique during a routine medical exam. Learn more about clinical breast exams from the [American Cancer Society](#).

For more information about [breast cancer diagnosis and stages](#) visit [Winship Cancer Institute](#) of Emory University.
