Freezing Out Breast Cancer

Printed from https://www.cancerquest.org/newsroom/2016/09/freezing-out-breast-cancer on 11/21/2026

Cryotherapy, the use of extreme cold, has been used to treat skin cancer for many years. New results show that cryosurgery may be a good alternative to traditional surgery for some early cases of breast cancer.

The treatment uses liquid nitrogen filled rods to freeze cancer cells, and can be done in a minimally invasive way.

How cold is liquid nitrogen? -321^{o} F (-196^{o} C) Pretty darn cold!!!
